

CITY OF COMMERCE

City of Commerce, Texas Municipal Airport (2F7) Fuel System Upgrades

Instructions to Bidders

July 23, 2024

Introduction

The Commerce Municipal Airport (2F7) is a small municipal airport located in NE Texas. Currently, there is a non-compliant 3,900-gallon AST at the airport with a pump, meter, and hose reel with filtration located southeast of the parking ramp. Very little parking for fueling is available and the tank is close to the taxi lane for the runway. It is for these reasons and several others that a new fuel system is proposed for construction. This fuel system will be constructed NW of the current fuel farm using a part of the GA parking ramp.

The proposed fuel system will be composed of a preexisting concrete containment structure, an Avgas tank, and a dispensing system. The base bid will be composed of the Avgas tank and dispensing system as well as all electrical systems. The Jet A tank will be added in a future project. Add Alternate bids will be for the removal of the old fuel system.

The Contractor selected for this project shall have a TCEQ Remover and Installer license on site at all times construction is taking place. ***The Supervisor for this project shall be OSHA Health and Safety 40 hour trained, and an OSHA Health and Safety Plan shall be prepared and on site. The site supervisor shall have a copy of the Health and Safety Plan at all times.***

For the Safety of the crew and aircraft:

- The runway shall remain clear of all vehicles and equipment at all times.
- A NOTAM shall be issued each day the crews are working.
- The FAA Safety AC 150/5370 – 2G Operational Safety on Airports during Construction should be followed at all times.
- No blowing dust or dirt will be acceptable. Actions such as watering the dust slightly to stop the dirt in the air must take place. FOD must be picked up ASAP.

Scope of Work

The proposed Scope of Work for this project is summarized as the installation of the installation of the self-serve Avgas system, the electrical power necessary to operate the Avgas and future Jet A, and the removal of the existing Avgas system. A complete scope is presented in the plans for this project.

- a. All work and Equipment shall be performed, and equipment supplied in conformance with the TxDOT and FAA Aviation Standards. The specifications to be referenced on this project are the TxDOT Aviation Division Construction Contract General Provisions.
- b. The pump skids for the Avgas and Jet A shall come prewired with motor starters and other components mounted within an explosion proof enclosure. All electronic components shall be constructed in accordance with the NEC.
- c. Fuel necessary for tests required by the Fire Department shall be purchased by the City, and if contaminated after the test, hauled by a registered hazmat truck for legal disposal. A manifest shall be completed and submitted to the Engineer.
- d. This project will require bonding and insurance. The City of Commerce will determine the limits of these policies.
- e. This is a public bid and as such will be opened and read aloud on the day of receipt. The bid will be awarded to the lowest responsible bidder.
- f. The Contractor shall have all retail meters calibrated to a retail sales standard to verify that the sales will be properly reflected on the receipt.

Bid Sheet

City of Commerce Municipal Airport (2F7) Fuel System Upgrades

Bid Date, Time, and Place:
August 29, 2024 @ 2:00 pm
Commerce City Hall
1119 Alamo St, Commerce TX

Contractor Name: _____

Address: _____

Signed: _____ Date: _____

Cell: _____ Email: _____

Base Bid

Base Bid, which includes the construction of the electrical power system, and all equipment necessary to construct and operate the Avgas system.
